PERSONAL STATEMENT

I am a full-stack developer and UI/UX designer with experience building web applications using React, Node.js, Express, Django, and MongoDB. I also design user-friendly interfaces with Figma and pay attention to both function and design. I have worked on real projects, joined tech challenges, and enjoy learning about cybersecurity and new technologies. I'm looking for opportunities to grow my skills and work on useful software with real impact.

WORK EXPERIENCE

Software Engineering Intern
Inversepay
15th - Nov 2025 - 07th Sept, Remote
Worked as a Frontend Developer on Harambee, a community fundraising platform that enables people and organizations to raise and receive funds for causes they care about. Built and maintained responsive user interfaces and contributed to the platform's overall user experience.

Full stack developer Intern
TechWise
04th May 2025 - 23th May 2025, Kigali - Rwanda
Me and my team built a responsive, clean prototype of an app that rewards points for recycling wastes and those points can be redeemed into rewards like Airtime but it was a prototype so the rewards don't actually work.

Full stack developer Intern
TechWise
25th April 2024 - 13th May 2024, Kigali - Rwanda
Independently built a full-stack web application using Django as part of a school-based internship. Handled backend logic, database design, and frontend development. Managed the entire project alone, gaining practical experience in full-cycle software development.

EDUCATION

Bsc. Software Engineering
Jan 2025 - Present

TVET Level 5 Certificate – Upper Secondary (High School Equivalent)
Sept 2022 - July 2025

PROJECTS

Bach
2026
Developed an inventory and sales management platform for product-importing businesses, enabling teams to track imported stock, shipment costs, sales, and real-time profit margins.

Skuul
2025
Developed a school management system that will manage schools like school book in libraries and help in other tasks like assigning students with work like Homework or some other form of assigments. For now I have developed the library part, which means librarian can add books, notify students to return them. And students can register themselves in the library and can borrow and return books. The project also features a leaderboard to help reward best readers.

Wastey
2025
I used NextJS to build a responsive, clean prototype of an app that rewards points for recycling wastes and those points can be redeemed into rewards like Airtime but it was a prototype so the rewards don't actually work. EDUCATION TVET Level 5 Certificate – Upper Secondary (High School Equivalent) Rwanda TVET Board – World Mission Highsc

KEY SKILLS

- React
- NextJS
- HTML, CSS and JS
- Typescript
- Node JS (Express)
- Mongoose
- Tailwind
- MySQL
- Python
- Django
- Docker
- UI / UX Design (Figma)

HOBBIES & INTERESTS

- Music
- Cybersecurity
